

Titania Windchill Web Collaboration Suite

Allow everyone in your organization to easily contribute to the technical documentation process.

Documentation teams rely on critical information and feedback from Subject Matter Experts (SMEs) and other review teams across your enterprise to ensure the accuracy and quality of the product and service information they produce. In order to support the collaboration with these teams throughout the content production process, authors spend countless hours manually converting, merging and copying information to and from various formats into their structured content environment. These iterative and error-prone processes create a significant burden on both the authors and the collaborators.

The use of XML markup by all those involved in the content creation and review process can dramatically reduce the burden by enabling direct information reuse, streamlined review processes, and much more. Until now this hasn't been feasible due to the costs, complexity and learning curve associated with casual authors and reviewers using traditional XML authoring and review tools.

With Titania Web Editor and Titania Web Reviewer, users are provided with an intuitive user interface that captures and manages XML behind the scenes. Accessible via a browser, these tools make it easy for contributors to quickly and effectively collaborate with the documentation team. All aspects of the content production process can be streamlined by removing the need for manual conversions and iterative reviews. For those contributors already using Windchill for content management the collaboration process is made even easier.

Simplifying Web Authoring and Web Review

Accessible via a browser, this suite makes it easy for contributors to quickly and effectively collaborate with the documentation team on all aspects of the content production process.

Key Benefits

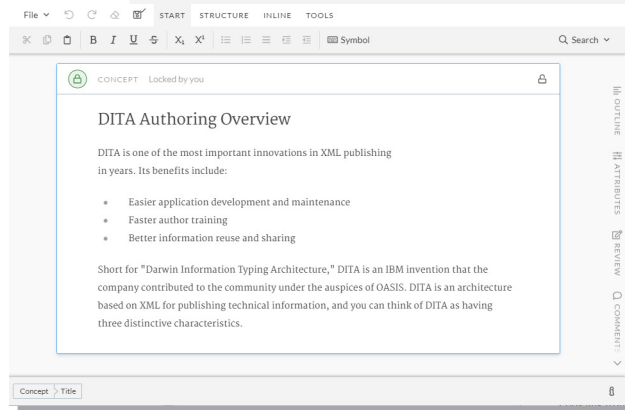

- Shorten content creation, review and publishing cycles
- Simplify the capture of text and non-textual content for all contributors
- Eliminate documentation burdens on SMEs, IT and authoring teams
- Improve consistency and accuracy of product information
- Improve time-to-market

Windchill Integration

Leverage the workflow automation, component content management and collaboration capabilities of this industry leading PLM system to enable content contributors, reviewers and authors to easily work together to streamline your organization's end to end content production process.

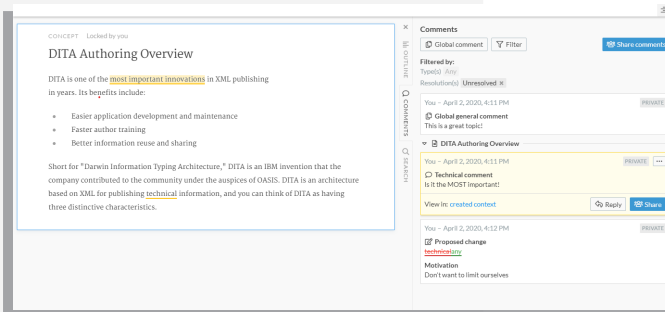

Key Features of Titania Web Editor

- Intuitive, web-based interface
- Real-time XML validation
- Bookmap or topic-based authoring view
- Copy & Paste using familiar keyboard shortcuts
- Include non-textual content (graphics, videos, formulas, etc.)
- Apply critical metadata assignment
- Support for Global Languages (Unicode characters and left-to-right)
- Seamless integration with Windchill (check out, check in, workflows)

Key Features of Titania Web Reviewer

- Simultaneous commenting and annotations
- Real-time collaboration
- Complete or filtered view of comments
- Clear detail on review needed and resolution
- Progress tracking via Review dashboard
- Easy Windchill workflow integration

Ease the Burden on Authors and Experts
